Presentations in Beamer

The basics

Safiya Sirota[1] Charly Fowler[2]

[1]Third year biostats PhD student
Columbia University
[2]Fifth year biostats PhD student
Columbia University

Computing Club, April 2024

Outline

Outline

What is LaTeX?

- LaTeX is software for typesetting documents

What is LaTeX?

- LaTeX is software for typesetting documents
- It is widely used in the scientific community

What is LaTeX?

- LaTeX is software for typesetting documents
- It is widely used in the scientific community
- Once you have the software, you can write LaTeX scripts in Overleaf, RMarkdown, text files, and other environments

What is Beamer?

- Beamer is a document "class" in LaTeX

What is Beamer?

- Beamer is a document "class" in LaTeX
- I'm using it right now to make these slides

What is Beamer?

- Beamer is a document "class" in LaTeX
- I'm using it right now to make these slides
- Typically, the "article" class is used for creating papers and "beamer" is used for presentations

Why use Beamer?

- Beamer, like the "article" class, typesets

Why use Beamer?

- Beamer, like the "article" class, typesets
- This means that once you understand how to use LaTeX, you don't have to worry about formatting your slides

Why use Beamer?

- Beamer, like the "article" class, typesets
- This means that once you understand how to use LaTeX, you don't have to worry about formatting your slides
- Presentation creation goes much faster if you have a lot of mathematical symbols in your content

Why use Beamer?

- Beamer, like the "article" class, typesets
- This means that once you understand how to use LaTeX, you don't have to worry about formatting your slides
- Presentation creation goes much faster if you have a lot of mathematical symbols in your content
- Many people in our field and adjacent ones use Beamer to create their presentations

Why not use Beamer?

- When you want to create a flashy presentation

Why not use Beamer?

- When you want to create a flashy presentation
- When you want a lot of control over the formatting and don't want it to be uniform across slides

Why not use Beamer?

- When you want to create a flashy presentation
- When you want a lot of control over the formatting and don't want it to be uniform across slides
- When you don't have many equations

Why not use Beamer?

- When you want to create a flashy presentation
- When you want a lot of control over the formatting and don't want it to be uniform across slides
- When you don't have many equations
- When you're in a rush and you haven't yet mastered Beamer

Outline

Tips for getting started

- It's always faster to start with a pre-made template; there's no need to begin with a blank document

Tips for getting started

- It's always faster to start with a pre-made template; there's no need to begin with a blank document
- We have plenty of resources on LaTeX Beamer from previous years' computing club meetings

Tips for getting started

- It's always faster to start with a pre-made template; there's no need to begin with a blank document
- We have plenty of resources on LaTeX Beamer from previous years' computing club meetings
- Creating your presentation in Overleaf may be helpful at first so that you can compile quickly to check that your document looks how you want

Tips for getting started

- It's always faster to start with a pre-made template; there's no need to begin with a blank document
- We have plenty of resources on LaTeX Beamer from previous years' computing club meetings
- Creating your presentation in Overleaf may be helpful at first so that you can compile quickly to check that your document looks how you want
- Leave yourself time to make your presentation if you are new to LaTeX; there is a learning curve

Tips for getting started

- We have plenty of resources on LaTeX Beamer from previous years' computing club meetings
- Creating your presentation in Overleaf may be helpful at first so that you can compile quickly to check that your document looks how you want
- Leave yourself time to make your presentation if you are new to LaTeX; there is a learning curve
- For this presentation, I started with this template

Outline

What can we do in Beamer?

- Easily create a title page

What can we do in Beamer?

- Easily create a title page
- Easily create a outline

What can we do in Beamer?

- Easily create a title page
- Easily create a outline
- Set a theme

What can we do in Beamer?

- Easily create a title page
- Easily create a outline
- Set a theme
- Decide when content shows on the slide

What can we do in Beamer?

- Easily create a title page
- Easily create a outline
- Set a theme
- Decide when content shows on the slide
- Insert equations

What can we do in Beamer?

- Easily create a title page
- Easily create a outline
- Set a theme
- Decide when content shows on the slide
- Insert equations
- Embed images

What can we do in Beamer?

- Easily create a title page
- Easily create a outline
- Set a theme
- Decide when content shows on the slide
- Insert equations
- Embed images
- Format content into multiple columns

What can we do in Beamer?

- Easily create a title page
- Easily create a outline
- Set a theme
- Decide when content shows on the slide
- Insert equations
- Embed images
- Format content into multiple columns

I'll show what the last 3 things look like in the presentation.

What can we do in Beamer?

- Easily create a title page
- Easily create a outline
- Set a theme
- Decide when content shows on the slide
- Insert equations
- Embed images
- Format content into multiple columns

I'll show what the last 3 things look like in the presentation. The first few functions I've already used throughout, but I'll show you what "coding" it looks like in a **.tex** file.

Inserting equations

- Writing equations in Beamer is one of the easiest things you can do once you know LaTeX!

Inserting equations

- Writing equations in Beamer is one of the easiest things you can do once you know LaTeX!
- There are a few different ways to make equations

Inserting equations

- Writing equations in Beamer is one of the easiest things you can do once you know LaTeX!
- There are a few different ways to make equations

The first way is with in-line text, like so,

Inserting equations

- Writing equations in Beamer is one of the easiest things you can do once you know LaTeX!
- There are a few different ways to make equations

The first way is with in-line text, like so,
$f(x|\mu, \sigma) = \frac{1}{\sqrt{2\pi}\sigma} \exp\{-\frac{1}{2}(\frac{x-\mu}{\sigma})^2\}$.

Inserting equations

- Writing equations in Beamer is one of the easiest things you can do once you know LaTeX!
- There are a few different ways to make equations

The first way is with in-line text, like so,
$f(x|\mu, \sigma) = \frac{1}{\sqrt{2\pi}\sigma} \exp\{-\frac{1}{2}(\frac{x-\mu}{\sigma})^2\}$.

Another way is by using the equation environment:

Inserting equations

- Writing equations in Beamer is one of the easiest things you can do once you know LaTeX!
- There are a few different ways to make equations

The first way is with in-line text, like so,
$f(x|\mu,\sigma) = \frac{1}{\sqrt{2\pi}\sigma} \exp\{-\frac{1}{2}(\frac{x-\mu}{\sigma})^2\}$.

Another way is by using the equation environment:

$$f(x|\mu,\sigma) = \frac{1}{\sqrt{2\pi}\sigma} \exp\{-\frac{1}{2}(\frac{x-\mu}{\sigma})^2\} \tag{1}$$

Inserting equations

You can also make the equation show up without a number,

$$f(x|\mu,\sigma) = \frac{1}{\sqrt{2\pi}\sigma}\exp\{-\frac{1}{2}(\frac{x-\mu}{\sigma})^2\}$$

Inserting equations

You can also make the equation show up without a number,

$$f(x|\mu,\sigma) = \frac{1}{\sqrt{2\pi}\sigma}\exp\{-\frac{1}{2}(\frac{x-\mu}{\sigma})^2\}$$

or in multiple lines:

$$\begin{aligned} f(x|\mu,\sigma) &= \frac{1}{\sqrt{2\pi}\sigma}\exp\{-\frac{1}{2}(\frac{x-\mu}{\sigma})^2\} \\ &= \frac{1}{\sqrt{2\pi}}\exp\left\{-\frac{(x-\mu)^2}{2\sigma^2}\right\} \end{aligned}$$

Inserting equations

Normal block

Finally, to make equations stand out, you can use these special blocks.

Inserting equations

Normal block

Finally, to make equations stand out, you can use these special blocks.

Alert block

The pdf for a R.V. X that follows a $N(\mu, \sigma^2)$ distribution is as follows.

Inserting equations

Normal block

Finally, to make equations stand out, you can use these special blocks.

Alert block

The pdf for a R.V. X that follows a $N(\mu, \sigma^2)$ distribution is as follows.

Examples

$$f(x|\mu,\sigma) = \frac{1}{\sqrt{2\pi}} \exp\left\{-\frac{(x-\mu)^2}{2\sigma^2}\right\}$$

Embedding images

Adding images to your Beamer presentation is also relatively simple.

Embedding images

Adding images to your Beamer presentation is also relatively simple. It does the formatting for you, so you just have to make sure your images are a good size for the page.

Embedding images

Adding images to your Beamer presentation is also relatively simple. It does the formatting for you, so you just have to make sure your images are a good size for the page.

Figure: Tree in my backyard

Slides with multiple columns

- One of the popular slide layouts in Powerpoint is a slide with multiple columns

Slides with multiple columns

- One of the popular slide layouts in Powerpoint is a slide with multiple columns
- Usually you may want 2 or 3

Slides with multiple columns

- One of the popular slide layouts in Powerpoint is a slide with multiple columns
- Usually you may want 2 or 3

- Luckily, you can do this in LaTeX as well.

Slides with multiple columns

- One of the popular slide layouts in Powerpoint is a slide with multiple columns
- Usually you may want 2 or 3

- Luckily, you can do this in LaTeX as well.
- This is a slide with 2 columns

Slides with multiple columns

Now let's try a slide with 3 columns. The first column here just has a text block.

Slides with multiple columns

Now let's try a slide with 3 columns. The first column here just has a text block.

- This column here has a couple of bullet points

Slides with multiple columns

Now let's try a slide with 3 columns. The first column here just has a text block.

- This column here has a couple of bullet points
- The next column will have a picture

- The next column will have a picture

Outline

What does the **.tex** file look like?

Now, I'll show you what everything looks like when written in a **.tex** file in Overleaf!

Outline

Using RMarkdown

Now, I'll show you very briefly what setting up a Beamer presentation in RMarkdown looks like.
